PROFESSIONAL PROFILE

Actuarial & Risk Analyst with 4 years of financial services experience spanning Solvency II modelling, market risk capital and technical provisions, and a long-standing personal commitment to economics and investing. Automates complex valuation and control workflows end-to-end. Complements this background by engineering and operating an advanced LLM-powered multi-asset trading platform. Now seeking to bring both threads together in a market or quantitative risk role in Geneva.

PROFESSIONAL EXPERIENCE

Sep 2023 – Present Strasbourg	Actuarial & Risk Analyst AFI ESCA Primary Analyst Responsible for Solvency II & Risk Frameworks — Non-Life Insurance - Executed end-to-end valuation of Technical Provisions (Best Estimate & Risk Margin) and SCR/MCR (standard formula, €30M balance sheet); designed automated sanity checks on asset, claim and premium inputs. - Modelled market risk capital (interest rate, spread, equity, currency (FX), and concentration modules), with full portfolio look-through; aggregated market and non-life sub-modules via SCR correlation matrices. - Led ORSA stress testing and scenario analysis, and full Pillar 3 regulatory reporting (QRT, RSR, SFCR) to the ACPR, including S.29 own-funds variation analysis and monitoring of regulatory developments (EIOPA). Savings & Investment Products — Life Insurance - Led monthly/quarter-end valuation controls for general-account and unit-linked portfolios, performing reserve roll-forwards, cash flow reconciliations, and data-quality checks; streamlined these workflows through R/SQL/Excel-VBA (processing times cut by 50% or more, up to 85% for core routine). - Executed policyholder crediting and product risk computations: allocated technical interest, profit-sharing (life & annuity portfolios), and real-estate fund (SCPI) dividends; computed PRIIPs risk metrics for a new savings product — VaR-based risk indicator (SRI), stochastic performance scenarios, KIDs.
May 2022 – Aug 2023 Strasbourg	Asset Management & Investment Risk Analyst — Internship & Apprenticeship - Configured stress-testing modules for investment portfolios: multi-factor shock vectors, risk correlation matrices, and permanent-impairment simulations of market downturns and asset recovery dynamics. - Managed trade routing and order placement for unit-linked funds; price feeds, NAV updates, asset inventories.

PERSONAL PROJECT — AI & SYSTEMATIC TRADING

Feb 2026 – Present	LLM-Powered Multi-Asset Trading Co-Pilot & Systematic Risk Engine (Docs & Samples on GitHub) - Engineered R/Python infrastructure: a signal engine mining 5s data, validated out-of-sample (hold-out, LODO CV); a daily screener ranking 500+ US/EU names in drawdown; a deterministic, fail-closed execution layer (Interactive Brokers API); and thesis-carrying alerts staged per asset, rebuilt as evidence shifts. - Designed, built and operate an LLM reasoning layer managing the full trade lifecycle across a multi-asset book: fed by automated daily technical and macro briefings (regime detection, news synthesis), the agent forms entry theses, ratchets ladderred stop-loss/take-profit tranches, and executes portfolio-wide graduated de-risking under staged governance (sealed plans, out-of-band confirmation). - Authored declarative playbooks for code-free scaling across assets; graduated agent autonomy — instructed, delegated, bounded loops — via 100+ Telegram commands; LLM quarantines ambiguity and asks for details.
-----------------------	---

EDUCATION

Sep 2018 – Aug 2023 Strasbourg	Master’s in Insurance & Risk Management; Bachelor’s in Economics & Management — Quantitative Track — Both with honors FACULTY OF ECONOMICS AND MANAGEMENT (FSEG), UNIVERSITY OF STRASBOURG Master’s thesis: “Stress tests in insurance: design and developments around a risk correlation matrix”
--------------------------------------	--

TECHNICAL SKILLS

Programming	R (data.table), SQL, Excel/VBA; working knowledge: Python, Git, LaTeX
Quantitative Finance Methods	Financial modelling, VaR methodologies, Monte-Carlo simulation, time-series analysis, hidden Markov models, feature engineering, backtesting & model validation, bootstrap inference
Languages	French (native), English (working proficiency), German (basic)
